

GENESIS UTILITIES
Multi-Utility Infrastructure Solutions

Complete Utility Infrastructure Solutions

Single and multi-utility infrastructure, coordinated from feasibility and design through to installation, connection and project completion.

UTILITIES MADE SIMPLE

GENESIS UTILITIES

One partner. A coordinated utility programme.

Genesis Utilities works with developers, contractors, property professionals and private clients to simplify the utility supply chain.

Our approach

We work collaboratively from day one, coordinating utility requirements around the wider construction programme. From early feasibility and network design through to installation and connection, our aim is to reduce interfaces, improve visibility and keep responsibility clear.

Project management with a single point of contact

Every project is overseen by an experienced Genesis Utilities project manager, providing a dedicated point of contact through planning, coordination and delivery.

Approved contractor network

Genesis Utilities operates an approved contractor verification process designed to ensure contractors engaged for utility works hold the qualifications, competencies, insurance and accreditations appropriate to the activities they undertake.

Single point of contact

Coordinated management from enquiry to completion.

Programme-led delivery

Utility activity aligned with the wider construction schedule.

Verified competence

Contractor requirements checked against the scope of work.

Utility infrastructure across six core service areas

A coordinated service model built around the needs of developments, infrastructure projects and property alterations.

Gas infrastructure

LP and MP network design, mains and services, meter relocation, diversions and associated gas infrastructure.

Water infrastructure

Water mains and services, network design, connections, metering and associated water infrastructure.

Electrical infrastructure

LV/HV network design and installation, mains and services, substations, connections and diversions.

Groundworks & civils

Utility trenches, excavation, backfill, reinstatement, substation bases and associated civil engineering.

Meter alterations

Gas, electricity and water meter relocations, utility coordination and service re-routing.

Feasibility studies

Early-stage utility assessment to understand connection routes, constraints, risks and likely infrastructure requirements.

GAS SERVICES

Gas infrastructure & meter relocation

Network design • mains & services • diversions • metering

What we deliver

Genesis Utilities coordinates gas infrastructure for domestic, commercial and development projects, from network design and installation through to meter-related works and live-network coordination.

- LP and MP gas network design
- Gas mains and service installation
- Meter installation and relocation coordination
- Gas diversions and abandonments
- Governors, manifolds, risers and associated pipework
- Excavation, backfill and reinstatement

Contractor competence

Gas works are undertaken through appropriately qualified contractors, with relevant Gas Safe qualifications and appropriate Lloyd's accreditations verified according to the scope of work.

QUOTATION TARGET

For standard enquiries with sufficient information, we aim to provide a detailed written quotation within 7 working days.

WATER SERVICES

Water infrastructure solutions

Mains • services • connections • metering

What we deliver

We coordinate water infrastructure for new developments and alteration projects, combining network design, installation and connection management within the wider project programme.

- Water mains and service installations
- Network design for development schemes
- Connections and diversions
- Water meter installation and relocation coordination
- Internal manifolds and associated infrastructure
- Excavation, backfill and reinstatement

Water competence

Water works are undertaken through appropriately qualified contractors, with relevant WIAPS, WaterSafe and other applicable competencies verified according to the scope and network requirements.

QUOTATION TARGET

For standard enquiries with sufficient information, we aim to provide a detailed written quotation within 7 working days.

ELECTRICAL SERVICES

Electrical infrastructure

LV/HV networks • mains & services • substations

What we deliver

Genesis Utilities coordinates electrical infrastructure for developments, including network design, mains and services, substations, diversions and connection activity.

- LV and HV network design and installation
- Electrical mains and services
- Substation bases, housings and associated infrastructure
- Network connections and diversions
- Meter installation coordination
- Excavation, ducting and reinstatement

Network competence

Personnel undertaking works associated with DNO and IDNO networks are required to hold the relevant qualifications, competencies and network-specific authorisations appropriate to the activities they undertake.

QUOTATION TARGET

For standard enquiries with sufficient information, we aim to provide a detailed written quotation within 7 working days.

GROUNDWORKS & CIVILS

Groundworks that support utility delivery

Excavation • trenches • reinstatement • substation bases

What we deliver

Utility delivery depends on the quality and sequencing of the work in the ground. Genesis coordinates civil engineering and groundworks around the needs of the utility programme.

- Utility trench excavation and preparation
- Backfill and reinstatement
- Substation foundation and base preparation
- Pipework and duct infrastructure
- Carriageway and development-site civils
- Housing-plot and infrastructure groundworks

Integrated delivery

Groundworks are delivered through the approved contractor network, with qualifications and competencies verified according to the project scope.

QUOTATION TARGET

For standard enquiries with sufficient information, we aim to provide a detailed written quotation within 7 working days.

METER ALTERATIONS

Gas, electric & water meter relocations

Property alterations · extensions · re-routing

What we deliver

For domestic and commercial properties, Genesis Utilities coordinates meter alterations where a meter or incoming service needs to be moved because of an extension, renovation or revised layout.

- Gas meter relocation coordination
- Electric meter relocation coordination
- Water meter repositioning
- Utility-provider and permit coordination
- Service re-routing for extensions and alterations
- Project management from enquiry through completion

Specialist support

Meter works are undertaken through appropriately qualified contractors, with qualifications and accreditations verified according to the type of utility and scope of work.

QUOTATION TARGET

For standard enquiries with sufficient information, we aim to provide a detailed written quotation within 7 working days.

FEASIBILITY STUDIES

Know the utility position before you commit

Early assessment • constraints • connection strategy

What we deliver

A utility feasibility study helps establish what may be required before committing to land, design or construction decisions. It can identify constraints early and support a more informed development programme.

- Review of existing utility information
- Potential connection points and route considerations
- Network and site constraints
- Wayleave/easement considerations where relevant
- Ground and environmental considerations where relevant
- Early infrastructure cost and programme inputs

Early clarity

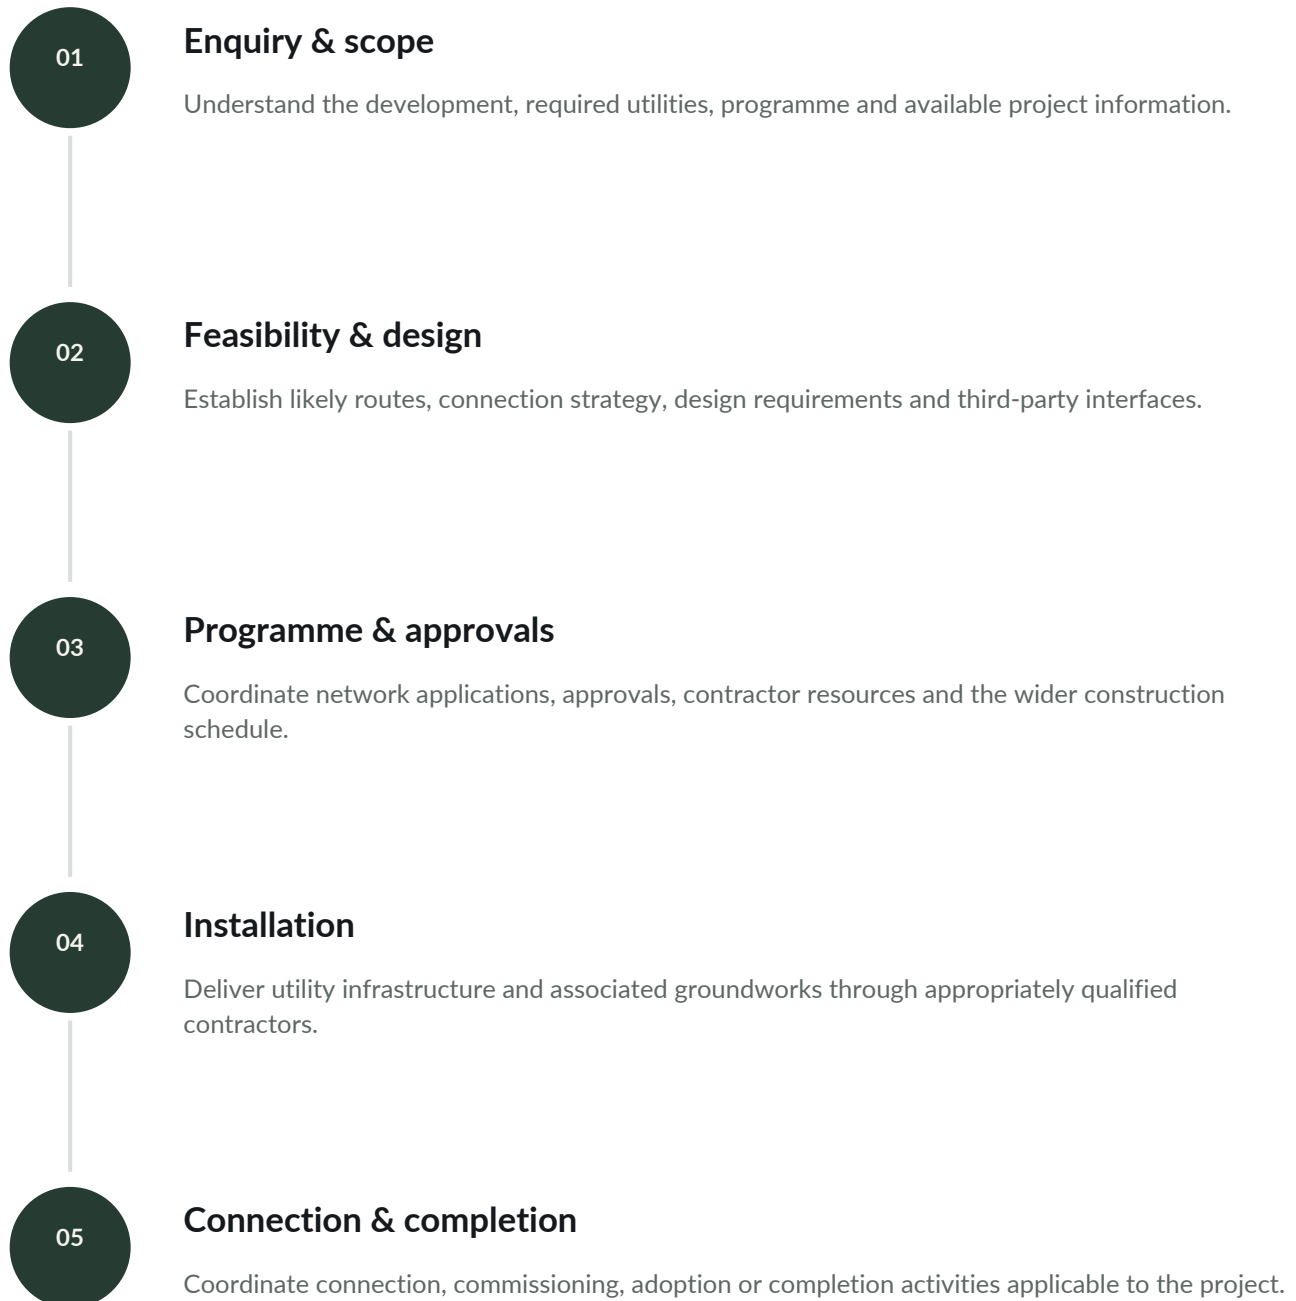

Feasibility is designed to reduce surprises later by identifying utility constraints, interfaces and information gaps at the earliest practical stage.

QUOTATION TARGET

For standard enquiries with sufficient information, we aim to provide a detailed written quotation within 7 working days.

A structured path from enquiry to connection

A coordinated process keeps responsibilities clear and gives the wider construction programme better visibility of utility activity.

CONTRACTOR COMPETENCE & PROJECT ASSURANCE

Qualified contractors. Verified competence.

Genesis Utilities operates an approved contractor verification process designed to ensure contractors engaged for utility works hold the qualifications, competencies, insurance and accreditations appropriate to the activities they undertake.

- Appropriate Lloyd's accreditations

- Relevant Gas Safe qualifications

- WIAPS

- WaterSafe

- CHAS

- Constructionline

- DNO / IDNO network competencies

- UK gas & water network requirements

IMPORTANT DISTINCTION

Where qualifications or accreditations are contractor-held, Genesis Utilities presents them as contractor competencies rather than claiming that Genesis UK (North West) Ltd itself holds every contractor-level registration.

Ready to discuss your project?

Tell us what you are planning and we will review the information, identify what we need next and set out the route to a detailed quotation.
