

See How Copilot Chat Works Inside the Microsoft Secured Ecosystem

A simple view of how your everyday tools and protections support responsible AI use.

Information Governance

Prompts and responses stay within your Microsoft ecosystem and follow your existing data-handling policies.

Enterprise Data Protection

Copilot Chat includes enterprise data protection for prompts and responses at no additional cost.

Threat Protection Signals

Supports safer AI use with the Microsoft threat protection signals already in place.

Compliance Support

Works seamlessly with your existing Microsoft compliance and governance tools.

Privacy by Design

Web queries generated through Copilot Chat do not include user or tenant identifiers.

No Model Training on Your Data

Your prompts and responses are not used to train foundation models.

Data Boundary Confidence

Prompts and responses are processed within the Microsoft 365 boundary that your organization already trusts.

Microsoft Copilot Chat supports your team inside the Microsoft ecosystem you already trust, backed by the protections your organization relies on every day.
