Pavilion E-1795

Fort Wynyard, a site steeped in history, stands witness to Cape Town's complex social dynamics.
The people, residing in socially inequitable positions, face the enduring pressure of historical events and societal inequalities.

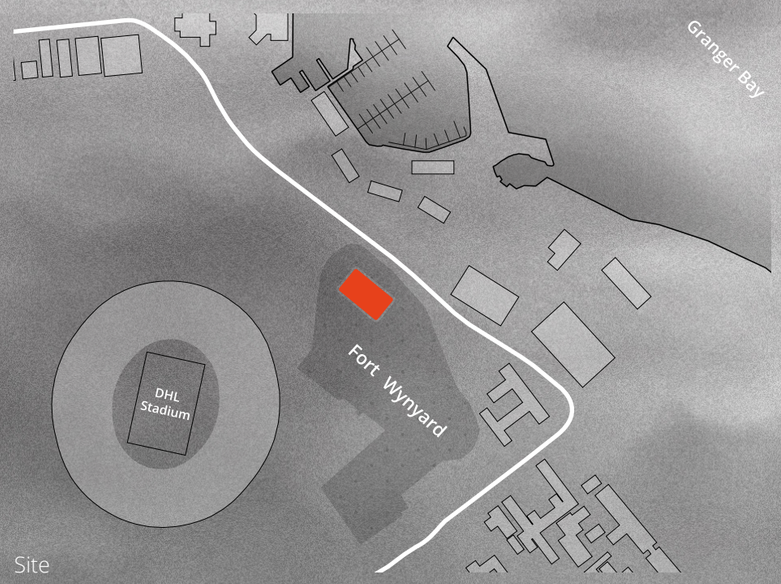

This proposal seeks to address this by offering a beacon of hope and innovation.

The Pavilion will be constructed primarily from fiberglass boxes, each measuring 400x500mm, connected by carbon fibre elements.

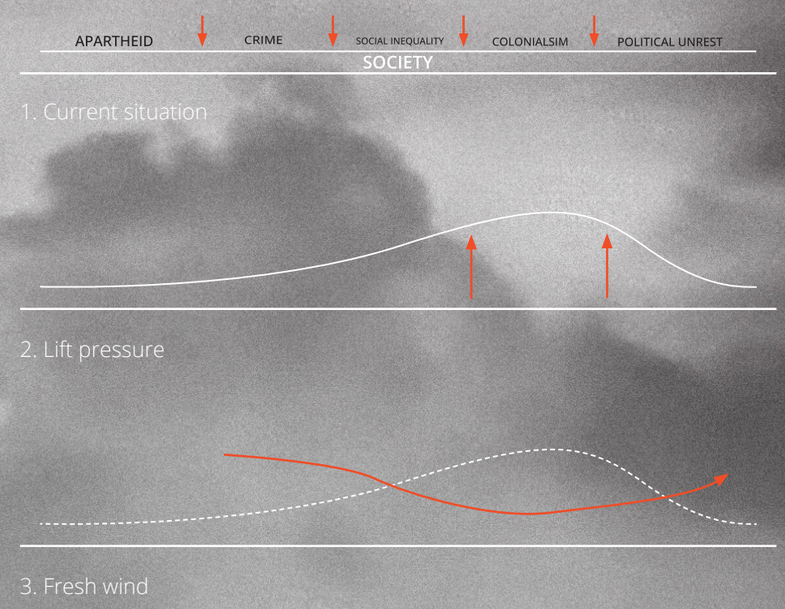

The design aims to allow for reflectlection upon the rich diversity of Cape Town's society as well as the materials used in the development of automobiles in the racing industry.

Strategically located near the racetrack (25m) and shoreline (250m), the pavilion provides a unique perspective on a part of the track that is not yet spectated, the east-west section of Beach Rd.

Now is not just the right time to act, it's **NOWNOW**.

Site

1. Current situation

2. Lift pressure

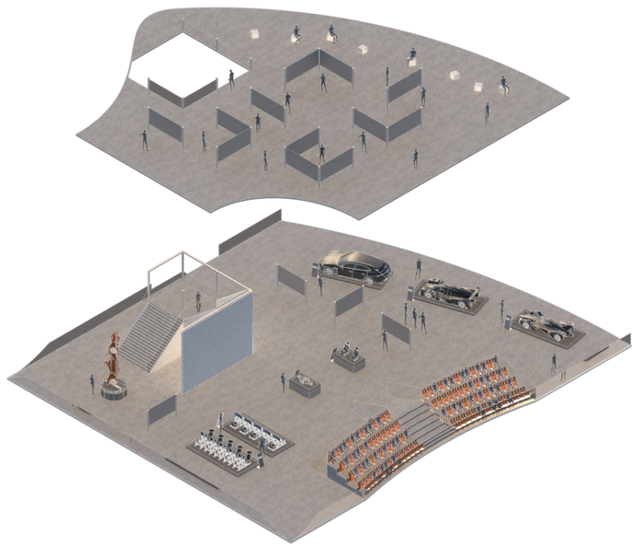

3. Fresh wind

4. Catalyse
