

RAD Mirror Installation Instructions

CAUTION-READ THIS FIRST IMPORTANT SAFETY INSTRUCTIONS

Carefully read the instructions appropriate for your fixture.

IF YOU HAVE ANY QUESTIONS REGARDING THE PROPER INSTALLATION OR LOCAL CODES, CONSULT A QUALIFIED ELECTRICIAN.

- Fixture are intended for wall / surface mounting.
- Injury to persons and damage to the fixture and/or mounting surface may result if the fixture is pulled from the surface.
To reduce the likelihood of such injury or damage, mount only on a surface that is mechanically sound.
- To avoid shock hazard do not work with frayed electrical wires.
- Install fixture in dry or damp applications only.

Tools Required

Stud finder / Level / Drill & bits / Screwdriver / Putty knife

Step 1 – Position the Frame

Position the mounting frame at the desired location with the milled slots oriented at the top. Use a level to confirm proper alignment.

Step 2 – Locate Wall Structure

Locate wall studs for mounting (preferred). If studs are not available, use appropriate wall anchors suitable for the wall material and mirror weight (anchors not included).

Step 3 – Access Wiring Compartment

Using a putty knife, carefully remove the frame cover to expose the wiring compartment. Refer to Figure 1.

Step 4 – Mount the Base

Drill pilot holes and secure the base to studs or approved anchors. Ensure the base is level, plumb, and firmly secured before proceeding.

Step 5 – Reinstall Frame Covers

Once the base is mounted, reinstall the frame covers.

Step 6 – Electrical Connections (ensure power is off before making connections to avoid shock)

Using the supplied cord, make wiring connections in electrical box.
All electrical work must comply with local electrical codes.

Step 7 – Install the Mirror

Hang the mirror onto the mounted base using the factory-installed cleat.
Confirm the mirror is fully seated and secure.

Final Check: ☐ Frame secure ☐ Wiring complete ☐ Mirror seated correctly
