General conclusions

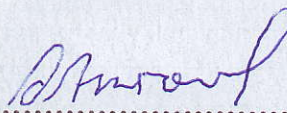

Nr.	Treatment method	ΔE	$\Delta f'$	$r(\Delta f, \delta f_k)$
1	Molecular filtration	-	-	+++
2	Molecular filtration + Turbulence + Silicon +Shungit	-	++	++
3	Molecular filtration + turbulence	>0	+	-
4	Molecular filtration + turbulence + silicon	-	-	-
5	Molecular filtration + turbulence	<0	+	-
6	Molecular filtration + turbulence + shungit	-	+++	-

Legend: (+) good, (++) strong, (+++) very strong, (-) without effect

The best results are achieved by Method Nr.6, where the peak of activity at energy level $E = -0,1112$ eV is increasing in order of 160%.

The experiments are performed by Prof. Anton Antonov, Doctor of Science,
Chairmen of the centre of Biopsychophysical Phenomena in man,
South – West University Blagoevgrad, Bulgaria.
