Comments Report

1. Area Course Evaluation

1.10) Use Area Below for Additional Comments

- Class is hard to comprehend so making it more relatable to us would be helpful.
- Course moves very fast and can be difficult to keep up with the material. Professor does a good job of being open to questions and explaining the logic and reasoning behind what we do in class and at home.
- Good instructor and means well but lacks ability to connect with students. Doesn't always feel like he is there to help the students. Often times when asking for help he tells them to use their resources instead of him helping.
- I enjoyed the class but I believe less homework should be given or the same amount of homework with less questions on the homework. However, the professor sometimes gives additional time to finish them.
- I think that it would be helpful if they professor would do an example of a homework question in class. Most of the time student is expected to learn most of the material by themselves already. This would give a better understanding on how to work on the material like the assignment being given.
- N/A
- Professor expects students to show up to class in order to understand the homework. His study guides are very helpful.
- professor Rad is extremely smart and really knows the subject.
- The professor really cared about the course and the subject.
- This course is very well taught. The material is challenging and lots of effort is required, but being able to have a grasp on the concepts is very doable. Teacher is very well suited for this material.
- This is a difficult subject and the students in this class have varying backgrounds in learning this subject. many people understood the lectures but still sought outside help with assignments and homework because of the difficulty leap that sometimes occurs between lecture examples and homework.
- This professor is one of the best professors at sac State
- Very easy to fall behind, and very hard to catch up when you are behind
- While there were times that the subject matter was confusing and he held strong to his value of not repeating himself, I felt he was very fair in giving extra help to students before/during class if they sought it out.

2. Optional Written Comments

2.1) What did you like about the course?

- Course curriculum was very straight forward, schedule was nice and study guides prepared us well for exams
- Everything I learned about analysis and data gathering to make important decision.
- He was attentive to our needs when it came to repeating the material that he was present. He also would spent a few different class periods throughout the semester reviewing the previous chapter material if many people had questions about the homework.
- His preparation he wants everyone learn the course very well.
- I enjoyed the in person instruction of this course. Professor Aryarad did an excellent job at answering any questions students had as well as taking his time to ensure everyone understood the content.
- I enjoyed the material and learning a new software (JMP).
- I enjoy how he provides videos of the lesson if we were not able to attend class or to help us look back at how to do something. I also like how he uses JMP and Excel when working out examples.
- I feel like the professor does a good job at explaining the concepts in the class and they are relevant to passing the class.
- I liked how my professor explained the material, gave us plenty of time to work on homework, and seemed nice and caring.
- I liked how the homework was done on Pearson. I've used the site before, and knew coming in to this class that I would have a better time learning the material with this class relying on it, given in part that it allowed us infinite chances to redo the problem for full credit.
- I liked how the instructor gave us a good amount of time to complete the homework.
- I liked learning about JMP and how to use it.
- I liked that I got to learn about jmp and how to quickly get data.
- I liked that the professor allowed notes for the tests, as he understood that the subject matter is pretty difficult.
- I like how the exams reflect the homework
- I like how the Professor teaches in class and reviews material and Shows examples.
- I like that the course is self explained and whenever you need help you have to give a lot of time working on the homework. The professor does he best to explain how to use Jmp.
- I like the structure and clarity for what chapters we were covering. The tests always seemed fair and were over what we covered. I feel like I did learn things that have stuck with me, and topics were built on throughout the semester.
- Intriguing
- It is easy if you do homework.
- it was a difficult class, but a good one. i liked learning something completely new.
- Lots of visual work. We get to use graphs and tables to find the answers needed.
- Professor knows the subject very well and is good about answering questions brought to him and explaining in more detail whenever necessary.
- Professor takes time to go over concepts and problems until students understand. He also takes time to review them the next class day to make sure we understand.
- teacher wants you to succeed and does his best to give you the tools.
- The consistency of, it is the same every week.
- The content we learned through the course was interesting. The professor made the classes enjoyable and easy to understand the concepts.
- The homework and study guides are really effective resources for the exams. They help reduce the stress levels and feel more confident in preparation.
- The knowledge gained within JMP software, helping answer questions that would conventional take much longer to answer in minutes.
- The light amount of homework.
