Why Choose Vuba Stone?

Vuba Stone Surface is a permeable, SuDS-compliant and highly decorative paving system. Vuba is perfect for providing a durable, design-led and environmentally friendly solution in housing developments, public buildings, private entrances and more.

5 Year Warranty

We offer a 5 year warranty on Vuba materials when a project is installed to our specifications, ensuring long-lasting quality and satisfaction.

100% Permeable

Vuba Stone is completely permeable, allowing water to pass through effortlessly. This feature helps protect your property from flooding.

Low Maintenance

A resin bonded surface requires minimal maintenance to preserve its aesthetics. We recommend periodic inspections every 5-10 years to ensure its durability.

Improves Curb Appeal

Create stunning curb appeal with Vuba Stone, combining our incredible Spanish marble with our durable resin for a truly remarkable finish.

Polyurethane Resin Binder

Vuba Stone features a UV-resistant polyurethane resin binder, which protects it from color shifting and fading, ensuring your surface stays vibrant and beautiful.

Authentic Spanish Marble

We offer 24 unique blends of authentic Spanish marble to match or complement your existing color scheme.

UV Stability

Vuba Stone's advanced UV stability guarantees a satin finish that lasts 5-10 years without requiring re-coating. Engineered for all climates worldwide, Vuba Stone delivers unmatched durability. In 2023, we introduced Vuba World Resin offering the highest concentration of UV protection for superior performance.

Proven performance!

Vuba World Resin has proven its durability in various locations including Arizona, Dubai and Mexico!

VubaMac & Overlay
Vuba Stone Full System

57% Higher Flexural **STRENGTH** than Asphalt.

Benefits

- 64 gallons / min / sq.ft permeates through. This allows for environmental advantages and efficient filtration.
- Less Dig. Complies with SuDS (Sustainable Drainage Systems) without the need for asphalt or concrete.
- Enhanced Warranty. 5 year warranty upgraded to 10 years when installed on VubaMac.
- 1 Day of Application. Save time by installing your base and surface on the same day.

STRENGTH AFTER 5 YEARS

*When compared on a flexural strength test in the Vuba Laboratory in a weathering machine.

No damage after 1000 wheel passes at 113°F

Roll Dimensions

Product Description

Vuba SRM is a structural reinforcement mesh developed using technology to reinforce earth structures. It can be applied within Resin Bonded surfaces and over other surfaces such as concrete to mitigate movement and subsequent cracking.

Topping System Overlay

Cover and Repair Existing Concrete and Asphalt

Benefits

- Cost Effective. Economical solution for enhancing existing surfaces, eliminating the need for costly removal and replacement.
- Bridge Crossovers. Overlay can seamlessly bridge crossovers, delivering a smooth and safe surface, while also strengthening the surface.
- Can Hold 30,000 lbs. Engineered for durability, overlays can withstand loads of up to 30,000 lbs, making them suitable for heavy-duty applications.
- UV Stability. Providing long-lasting color retention and resistance to sun damage for an enduring, attractive look.
- 10 Year Manufacturer's Warranty. We provide a 10 year manufacturer's warranty when installed per our recommended overlay guidelines, including SRM.

Vuba Stone Cleaning and Aftercare Guide

POST INSTALLATION CARE

Healing Time

Do not walk on your new Vuba Stone surface for 24-48 hours and do not drive for 48-72 hours after installation.

Don't Allow Spills

Make sure there are no spills on the resin while it is curing because excess moisture can build up. This will cause the Vuba Stone surface to weaken and discolor during the curing process. Continued spills cause erosion over a long period of time, which will cause the surface to degrade.

Footprint Marks

Make sure that no people or pets walk on the newly installed surface. Paw prints cannot be removed. Animal deterrents such as tape or barriers around the perimeter can be used.

The 5 Most Important Details To Remember

Static Wheel/Small Turns

The pressure generated by static spinning can dislodge aggregates from the surface. Once the matrix has been broken, the surface will weaken and fall off. It is very important that vehicle wheels do not spin when stationary or moving slowly, and small spins should be avoided.

Impact Damage/High Point Loads

Be careful not to drop heavy equipment on the driveway, such as skips. Note that these can often leak rust, which can be difficult to clean. Hydraulic jacks can sink the surface of the resin paving. To use the latter, they should be placed on a wooden board to distribute the load.

Chemicals and Stains

Gasoline, solvents, and similar liquids should ideally not come into contact with the resin surface. In the event of spills, dilute and clean up immediately. Solvents and some chemicals will degrade the resin, causing the stones to come loose over time.

Filtration/Discoloration

Like all paving surfaces, resin paving will discolor if permanently covered over a long-term basis with a close contact object. Discoloration occurs due to leaching and lack of exposure to air or sunlight. An example would be placing a flat-bottomed flower pot or storage box on it. Use elevated planters and avoid storing items such as boxes on the surface.

Rejuvenate Your Surface

A great way to extend the life of your driveway is to seal the surface after a deep cleaning. This can be done using a diluted UV polyurethane resin sealer. We recommend doing this 5-10 years after installation.

Cleaning Practices

It is very good practice to regularly clean your resin surface. For lighter colors, it will be even more important to perform frequent cleaning.

Resin surfaces can be cleaned with a pressure washer, it is recommended to hold the lance at a 90 degree angle and at least 12 inches from the surface. Cleaning too close can cause aggregates to break off.

Oil, Dirt and Debris

Oil can easily penetrate hard surface materials (particularly lubricating oil or fuel) but should not stain if spills are removed promptly with an absorbent material. If the stain persists, an emulsifying degreaser should be used.

Prolonged contact with any solvent should be avoided; contact Vuba for advice if you are unable to remove the stain.

Herbs, Moss and Lichens

There should be a permeable membrane under the base to prevent weed growth from underground. The absence of a membrane will result in weed growth through the resin paving, as the resin surface will not be able to prevent this. It is also possible for weeds to grow on the resin surface, but these can be easily removed with a pressure washer.

Organic growth, such as moss, lichens and algae, can be common on hard surfaces where the area is heavily shaded or under trees. If such growth occurs, the area should be treated with the appropriate product, following the manufacturer's instructions.

Fruits, Berries and Leaves

Fruits and leaves can stain all types of paving surface, so care must be taken to clean them from the resin surface before they begin to leach into the resin paving.

For dirty areas, it is recommended to use a mixture of liquid sodium hypochlorite (NaClO), obtained from pool maintenance suppliers, and a non-oxidising shampoo (e.g. baby shampoo).

Dilute 15 liters of sodium hypochlorite with 4.5 liters of water and add 100 ml of baby shampoo. If possible, the mixture should be applied with a pump sprayer and treat the entire area, not just individual spots.

Pre-wet the entire area with clean water and spray the cleaning liquid onto the surface. Gently scrub the area with a stiff-bristled brush. After 15 minutes, wash the surface with clean water, making sure the residue does not run off onto any vegetation.

Rust and Tire Marks

Rust can come from two sources. Typically, it is caused by leakage from grills, flower baskets, and other metal garden objects. Care must be taken to prevent these objects from leaking rust onto the resin surface.

Natural aggregates in resin paving may contain pyrite which, when exposed to rain or dew, can begin to rust. Unfortunately, this is one aspect of resin paving that, although very rare, can occur naturally.

Either cause of rust can be cleaned with a non-acidic rust remover. Follow the manufacturer's instructions for more information.

Tire marks can usually be removed by steam cleaning or by scrubbing the area with detergent and hot water.
