

The Enterprise Operating System

NEXUS Enterprise CRM

A tier-1 CRM already built into your data core.

Client 360, visual lifecycle pipelines, and AI-native NexusSDR outbound all run on the same ledger as your invoices, so sales and finance never fall out of sync.

Key Capabilities

- Client 360 account view
- Visual lifecycle pipelines
- NexusSDR AI outbound prospecting
- Shared identity and audit trail with finance and support
- Standard CRM included from Starter

Full Context at First Contact

Because CRM shares a data core with billing and support, engineers and reps see full account history the moment a client reaches out — no toggling between systems to piece together context.

Every engineer sees the whole account history before they pick up. That alone changed how our first response reads to the client.
