I made a **3D-printable volcano model** for you! 🌋🔥

Your STL model

File format: STL

Approximate size: 121 × 120 × 65 mm

Features: rocky slopes and crater

Download the volcano STL ↗

Open the file in Cura, Bambu Studio, or another slicer to prepare it for printing.

Important: This STL contains the volcano and crater, but not the smoke cloud from the picture. The model is a basic printable version, not an exact copy of the image. 😌

‹/›

You said:

make it so it can hold smth

ChatGPT said:

You said:

can this hold a phone

ChatGPT said:

Not properly yet 😅🌋 The volcano has a hole at the top, but a phone could fall inside because there's no slot to hold it upright.

I'd redesign it like this:

- 📱 **Phone holder:** A slot at the front, angled backwards to support your phone.

- 🌋 **Volcano design:** Keep the rocky slopes, crater and lava channels.
- 🔦 **Charging:** Add a small gap at the bottom for a charging cable.
- 🖨️ **3D printing:** Make the base wide and sturdy so it doesn't tip over.

One question: Which phone should it hold?

You said:

make it portable

Worked for 1m 12s

ChatGPT said:

🌋📱 Here's your **portable volcano phone holder** design! Compact enough to carry in a backpack, with a volcano-shaped base and a support for your phone.

3D printing files

STL — ready to open in a slicer

Download the STL model ↗

SCAD — editable design file

Download the SCAD file ↗

Approximate dimensions

Width: 9.6 cm

Depth: 9.6 cm

Height: 8.7 cm

Portable design

Small, lightweight, volcano-inspired.

Before printing: Test the phone slot in your slicer to make sure it fits your phone and case. This is a prototype design, so the fit hasn't been physically tested. 🖨️

You said:

perfect theres even a charging hole now makre it into a 3d model

ChatGPT said:

You said:

lemme download it

ChatGPT said:

Here you go! 🌋📱

- 🖨️ **Download the 3D model (STL)** ↗ — open it in Cura or Bambu Studio to prepare it for printing.
- 🛠️ Download the editable SCAD file ↗

Important: The model is a prototype. Check the phone slot and charging-cable opening in your slicer before printing. 🙏

You said:

make it .obj

Worked for 10s >

ChatGPT said:

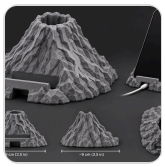

Here you go! 🌋📱

⬇️ **Download your volcano phone holder (.OBJ)** ↗

You can open it in Blender or import it into compatible 3D software.

Note: This is the converted model. Check the phone slot and charging-cable opening before printing. 🖨️

You said:

its not the same

ChatGPT said:

You're right 😭 — the OBJ I gave you was not an accurate match for your picture. The model needs to look like **your exact volcano phone stand**, including:

- 🌋 The rocky volcano with a hollow crater.
- 📱 The wide front ledge that holds the phone at an angle.
- 🔌 The opening underneath the ledge for a charging cable.
- 🪨 The compact, roughly 9 cm wide design.

I've made a revised OBJ model with the volcano shape, crater, phone-support ledge, and charging-cable gap.

Volcano Phone Stand — OBJ

3D model · millimetres · approximately 9.2 cm wide

Download the revised OBJ file ↗

Important: This is a newly constructed approximation of your reference, not an exact replica. The geometry hasn't been test-printed, so inspect it in Blender or your slicer before printing.
