

A PRODUCT FROM 

 **RAMSYS** ^{connect}®

A secure, low-latency remote access solution designed to enable real-time control of sensitive remote-site computers without exposing them to external or unsecured networks.

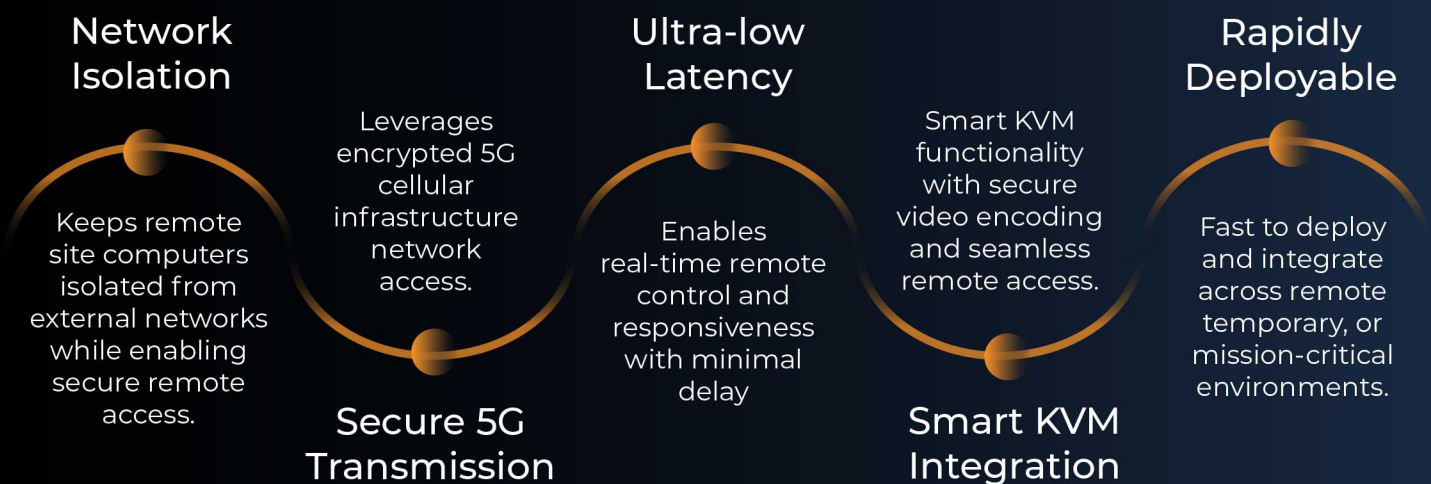

[LEARN MORE](#)

RAMsys Connect

RAMsys CONNECT is a secure, low-latency remote access solution designed to enable real-time control of sensitive remote-site computers without exposing them to external or unsecured networks. The system is built around a fully isolated architecture, where the remote PC remains completely disconnected from external networks while video output is captured through HDMI or DisplayPort encoding and securely transmitted over 5G cellular or Starlink satellite infrastructure.

This enables operators to maintain full remote control and real-time responsiveness without direct network exposure, significantly reducing cybersecurity risks while ensuring seamless remote operations in both fixed and remote environments.

Key Features

Applications

- Law Enforcement & Public Safety
- Defense & Tactical Ops
- Mobile Command Vehicles
- Critical Infrastructure (SCADA)

Advantages

- Zero exposure of sensitive Systems
- Real-Time control with low latency
- No dependency on fixed networks
- Portable & High reliability via Multi-SIM

Who Are We?

At Intertech Software Development (ISD), innovation is at the heart of everything we do. Established in 2017 and proudly based in Dubai, UAE, with a strong presence in Cairo, Egypt, ISD was born out of a vision to deliver cutting-edge, customer-centric software solutions tailored to meet the highest security and operational standards.

The RAMsys suite is our flagship achievement, a comprehensive situational management system designed to redefine how businesses approach security, efficiency, and control.

**9 Years of
