FOR IMMEDIATE RELEASE

Checkpoint Technology Solutions LLC Completes Comprehensive Technology Deployment at Becoming Collegiate Academy

Integrated classroom, network, communications, security, and Chromebook technology supports BCA's instructional environment and future growth.

JACKSONVILLE, Fla. - September 17, 2026 - Checkpoint Technology Solutions LLC announces the completion of a comprehensive technology deployment for **Becoming Collegiate Academy (BCA)** in Jacksonville, Florida. The work brought together classroom technology, networking, communications, security-related infrastructure, Chromebook management, and administrative technology into a coordinated school environment.

A Connected Technology Environment

The deployment included technology across several areas of the academy:

- **Interactive classroom technology:** Installation and configuration of BenQ interactive education displays to support digital instruction, presentations, multimedia content, and classroom collaboration.
- **Network and wireless infrastructure:** Network, switching, wireless connectivity, and supporting infrastructure for staff, student devices, classroom technology, voice communications, and other connected systems.
- **Student Chromebook environment:** Google Admin configuration supporting managed Chromebook sessions and centrally managed instructional resources, including the school's Time To Learn bookmark structure with organized access to ELA, Math, testing, games, STEAM, and other learning resources.
- **VoIP communications:** A 3CX-based telephone environment with Yealink phones, digital receptionist functionality, office call routing, after-hours messaging, school-wide paging, and grade-level paging capabilities.
- **Security and access technology:** Supporting technology infrastructure for the academy's surveillance and controlled-access environment.
- **Classroom and administrative technology:** Configuration and deployment of technology supporting classrooms, instructional spaces, and school operations.
- **Ongoing IT management:** Configuration management, troubleshooting, technology planning, and continued technical support for the school's growing environment.

Technology Built Around Education

"Technology in a school should do more than simply work - it should make it easier for teachers to teach, students to learn, and administrators to operate the school," said a representative of **Checkpoint Technology Solutions LLC**. "Our work with Becoming Collegiate Academy brought multiple technology systems together into a coordinated environment while establishing an infrastructure that can continue to grow with the academy."

Checkpoint's work also gives BCA centralized tools for managing instructional technology. Educational websites and resources can be deployed through Google Admin, interactive classroom displays support digital communication and instruction, and the 3CX communications platform provides both targeted and school-wide communication options.

Supporting BCA's Continued Growth

As Becoming Collegiate Academy expands its facilities and programs, the technology environment can be extended to support additional structured Cat6 cabling, wireless access points, classroom technology, computing equipment, communications, security systems, and other infrastructure associated with campus growth.

The BCA project reflects Checkpoint Technology Solutions LLC's ability to coordinate multiple technology disciplines for an educational environment, including networking, structured cabling, wireless infrastructure, VoIP communications, physical security technology, audiovisual systems, interactive classroom technology, cloud administration, and ongoing IT support.

About Checkpoint Technology Solutions LLC

Checkpoint Technology Solutions LLC provides technology solutions for educational institutions, businesses, and organizations. Services include network infrastructure, structured cabling, wireless networking, VoIP communications, security technology, audiovisual systems, interactive classroom technology, system integration, and ongoing technology support. Checkpoint helps organizations design, deploy, manage, and expand technology environments aligned with their operational needs.
