EMO Hannover 2023: GINDUMAC as solution provider for sustainable machine park management

(Kaiserslautern, 07/24/2023)

From September 18th to 23rd, 2023, the world of production technology will converge at the leading trade fair EMO in Hannover. Embracing the theme "Innovate Manufacturing", the organizers call for new innovations and driving transformation. Joining this initiative, GINDUMAC GmbH will participate as an exhibitor at the thematic booth "The Future of Sustainability in Production" in Hall 16, Stand F11.

At EMO 2023 in Hanover, the two managing directors Daniel Kaiser and Benedikt Ruf will demonstrate the role that predictive lifecycle management of machines plays in economically sustainable production planning.

"For many of our customers, resale is a necessary evil. Often, the sale of inventory machines is initiated too late and reactively, resulting in inefficiencies and avoidable opportunity costs," Kaiser explains.

GINDUMAC offers a comprehensive all-round carefree package for machine sales and, as a solution provider, acts as a link to the secondary market. The platform company takes care of the entire transaction processing, from machine valuation, marketing and purchase to logistics, customs, and export handling.

“The EMO provides us with the perfect opportunity to drive essential insights into proactive machinery management. By strategically integrating machinery resale into their production plans, manufacturing companies ensure enhanced process reliability and active value maximization," adds Ruf.

Extending the lifecycle of a machine through multiple users conserves resources in the production of new machines. When companies plan machine resale in conjunction with new investments, they contribute positively to the global CO2 balance and act in an ecologically sustainable manner.

Embracing this year's theme, "Innovative Manufacturing," GINDUMAC is committed to bringing more sustainability to machinery resale. At the joint booth "Future of Sustainability in Production" in Hall 16, Stand F11, the company will showcase its innovative platform solutions for resource-efficient lifecycle management of machine tools, sheet metal and plastic processing machines, as well as robotics.
