The Jerusalem AI Center

PUTTING THE HUMAN BACK IN AI · JERUSALEM

We exist to establish Jerusalem as a leading intellectual and technological center for shaping the future of artificial intelligence by bringing the city's enduring traditions of scholarship, moral inquiry and human responsibility into conversation with the frontier of AI and innovation.

For millennia, Jerusalem has been a place where humanity's most fundamental questions have been asked and debated. Today, as artificial intelligence challenges our understanding of knowledge, judgment, creativity, and human agency, these questions take on renewed urgency. Through education, research, collaboration, and practical innovation, the Center seeks to bring Jerusalem's distinctive intellectual inheritance to bear on the development and application of AI, cultivating leaders and builders who can ensure that technological progress serves humanity rather than diminishes it.

Empowerment through education

Many people have never been shown how accessible AI is, and many have kept their distance from the tech world on purpose. The Center is built for them: a place to learn, discuss, network and benefit from AI. We start from zero, in plain language, and teach how to use AI safely and get real benefit from it whether for work, education or in daily life. No tech background needed.

What we do

The center empowers through education; enables through networking; and elevates through cohorts providing the ability for individuals and the community to use AI for the betterment of humanity.

- **AI Daily & JAC AI Weekly** — one practical AI tip each morning on WhatsApp, and a weekly edition with the week's AI news in plain language. Free, and beginners are welcome.
- **MV3 Roundtables** — "Monkey vs. Man vs. Machine": open roundtables on what stays human in the age of AI. The first was held on October 11; the next date is coming soon.
- **The Think Tank** — now forming, to help understand, handle and approach AI in this world, growing out of the MV3 roundtables.
- **The Elite Cohort** — a key initiative: a path from the beis medrash to the front line of AI, for exceptional minds becoming world-class AI builders.
- **Venture & founder support** — helping builders launch AI ventures from Jerusalem.

How you can help

We are building a permanent home for this work in Jerusalem, and the right people make the difference.

Introduce — Connect us with funders, foundations, partners and community leaders who share the vision.

Host — Bring a session or roundtable to your community, organization or company.

Support — Sponsor a program, a roundtable series or the Elite Cohort, or support the Center directly.

Share expertise — Teach, speak, mentor, or join the Think Tank conversation as it forms.
